

Business Questions

Objective 1

Measure and monitor current readmission performance.

Business Questions:

1. What is the overall 30-day readmission rate?
 2. How has the readmission rate changed over time?
 3. Which hospitals have the highest readmission rates?
 4. Which ward and admission types have the highest 30-day readmission rates?
 5. Which diagnostic category contributes the most readmissions?
-

Objective 2

Identify factors associated with readmissions.

Business Questions:

Demographics

1. Which age groups have the highest readmission rates?
2. Does gender influence readmission?
3. Are there geographic differences?
4. Are patients' social economy status (e.g. BPL holder) affect the 30-day readmission?
5. Does health insurance type affect 30-day readmission?
6. Does the number of comorbidities affect 30-day readmission?
7. Does a history of previous admissions affect 30-day readmission?

Clinical

8. Which diagnoses are associated with higher readmission rates?
9. Do chronic conditions increase readmission risk?
10. Does the medical procedures affect 30-day readmission?
11. Which laboratory abnormalities are associated with readmission?

Operational

12. Does length of stay affect readmission?

13. Does discharge disposition matter?
 14. Does hospital tier affect 30-day readmission?
 15. Does hospital teaching status affect 30-day readmission?
 16. Does hospital bed capacity affect 30-day readmission?
 17. Are patients discharged on weekends more likely to experience 30-day readmission?
-

Objective 3

Develop a risk stratification approach.

Business Questions:

1. Can patients at elevated risk of 30-day readmission be identified before discharge?
 2. Which patient, clinical, and operational characteristics should be considered when identifying patients at elevated risk?
 3. How effectively can high-risk patients be distinguished from lower-risk patients?
 4. Can patients be stratified into clinically useful risk groups?
 5. What information is needed to evaluate whether a risk-stratification approach is suitable for operational use?
-

Objective 4

Recommend interventions.

Business Questions:

1. Which patient groups should be prioritized for enhanced discharge planning?
2. Which clinical or operational areas should be prioritized for intervention?
3. Which high-risk or high-burden groups should receive additional care-management resources?
4. How should limited resources be prioritized based on readmission risk and burden?
5. What interventions should be considered based on the identified patterns and risk factors?
